

## Non-AEM Monopolar Laparoscopic Instruments: Complication and Mortality Rates from Thermal Bowel Injuries

Description	USA Data
<b>Number of monopolar laparoscopic procedures performed in the USA every year:</b> <ul style="list-style-type: none"> <li>3 million laparoscopic procedures annually in USA</li> <li>85% use monopolar electrosurgical energy</li> </ul>	<b>2,550,000 procedures Annually<sup>1</sup></b>
<b>Incidence of thermal bowel injuries during laparoscopic surgery:</b> <ul style="list-style-type: none"> <li>1.3 bowel injuries in 1000 procedures (50% are due to thermal injury)</li> <li>thermal injuries likely underreported</li> </ul>	<b>0.065%<sup>2-5</sup></b>
<b>Incidence of death from thermal bowel injuries during laparoscopic surgery:</b> <ul style="list-style-type: none"> <li>Peritonitis has a mortality rate of 25%</li> <li><math>0.065\% \times 25\% = 0.01625\%</math></li> </ul>	<b>0.01625%<sup>6</sup></b>
<b>Number of preventable monopolar laparoscopic bowel injuries:</b> <ul style="list-style-type: none"> <li><math>(2,550,000 \text{ procedures annually}) \times (0.065\% \text{ risk}) \times (10 \text{ years}) = 16,575</math></li> </ul>	<b>16,575 injuries over 10 years</b>
<b>Number of preventable monopolar laparoscopic deaths over a 10 year period:</b> <ul style="list-style-type: none"> <li><math>(2,550,000 \text{ procedures annually}) \times (0.01625\% \text{ risk}) \times (10 \text{ years}) = 4,144</math></li> </ul>	<b>4,144 deaths over 10 years</b>
<b>Number of preventable monopolar laparoscopic deaths per year:</b> <ul style="list-style-type: none"> <li><math>(2,550,000 \text{ procedures annually}) \times (0.01625\% \text{ risk}) = 414</math></li> </ul>	<b>400 - 500 deaths per year</b>
<b>Number of preventable monopolar laparoscopic deaths per day:</b> <ul style="list-style-type: none"> <li><math>(2,550,000 \text{ procedures annually}) \times (0.01625\% \text{ risk}) / (365 \text{ days}) = 1.14</math></li> </ul>	<b>1 - 2 deaths per day</b>

## Non-AEM Monopolar Laparoscopic Instruments: Complication Rates from All Thermal Injuries

Description	USA Data
<b>Number of preventable monopolar laparoscopic burns over a 10 year period:</b> <ul style="list-style-type: none"> <li>4.869 injuries in 1000 procedures<sup>7</sup> (50% are due to thermal injury<sup>2</sup>)                             <ul style="list-style-type: none"> <li><math>(4.869/1000) \times (50\%) = 0.243\% \text{ risk}</math></li> </ul> </li> <li><math>(2,550,000 \text{ procedures annually}) \times (0.243\% \text{ risk}) \times (10 \text{ years}) = 62,080</math></li> </ul>	<b>62,080 injuries over 10 years</b>
<b>Number of minutes between preventable monopolar laparoscopic burns:</b> <ul style="list-style-type: none"> <li><math>(2,550,000 \text{ procedures annually}) \times (0.243\% \text{ risk}) / (365 \text{ days}) \times (24 \text{ hours/day}) \times (60 \text{ min/hour}) = \text{every } 84 \text{ minutes a patient burn occurs}</math></li> </ul>	<b>Every 90 minutes a patient is burned</b>
